TECHINCAL SKILLS

Languages, Libraries & Core: Python, PHP, ReactJS, SQL, RESTful API, MVC Architecture
Frameworks & DBs: Django, Django REST Framework (DRF), Laravel, MySQL, PostgreSQL
Tools & Systems: Git, GitHub, Postman, JWT Authentication, Sanctum, RBAC

PROJECTS

Mini Uber Eats API | Python, Django REST Framework, Redis, Celery, Docker

- Built a multi-vendor food delivery backend with DRF, utilizing Redis and Celery for asynchronous background task processing and notification queues.
- Containerized the complete application stack using Docker to ensure reliable environment parity and seamless deployment.
- Designed normalized relational database schemas using Django ORM to efficiently manage complex order lifecycles, menus, and multi-vendor interactions.

Python-Triage CLI | Python, Pytest, LLM APIs (Groq, OpenAI, Gemini), Rich, pipx

- Built a developer CLI tool that parses raw ANSI test streams (Pytest, Django) to automatically cluster cascading test failures by diagnostic root cause.
- Engineered a deterministic pre-grouping engine that samples one representative traceback per failure cluster, slashing LLM token usage and costs by >90%.
- Implemented multi-provider LLM analysis (Groq, OpenAI, Gemini) with set-theoretic guardrails to eliminate hallucinations and auto-generate remediation scripts (.sh, .ps1).

Ticketmaster |Django REST Framework, ReactJS, PostgreSQL, JWT

- Built a full-stack transit reservation platform featuring automated sequential seat allocation algorithms, eliminating user friction and preventing double-booking race conditions.
- Implemented atomic database transactions (@transaction.atomic) to guarantee data integrity during dynamic booking modifications, partial ticket cancellations, and real-time inventory recalculations.

Blog Content Management System | Laravel, ReactJS, MySQL, Sanctum

- Architected a REST API backend with Sanctum authentication and RBAC, integrated a dynamic React.js frontend, and engineered real-time analytics, category-based content recommendations, and automated SMTP notification pipelines.

EXPERIENCE

WeGeni - IT Services & Consulting | Tech Associate Intern **April-June (2025)**

- Engineered modular Laravel REST API services for Young Chanakya (Blogs, Podcasts, Events), standardizing JSON payloads.
- Optimized Eloquent ORM queries and MySQL schemas to reduce endpoint response latency during high-volume data retrieval.

FintechGie - Business + Technology | Full-Stack Developer Intern **2023-2024**

- Developed secure server-side applications in Laravel for Qifi, implementing role-based authentication and session security.
- Designed relational MySQL schemas and integrated REST APIs with automated payload validation to safeguard database transactions.

EDUCATION

Bachelor of Technology Artificial Intelligence and Data Science **2021-2025**
Sri Shanmugha College of Engineering and Technology
CGPA - 8.4
